

1 **ABSTRACT OF THE DISCLOSURE**

2 This invention relates to a device for personal cooling, warming and
3 general hygiene. More particularly, it relates to the use of thermo-electric
4 technology for personal cooling or warming to give relief from heat or chills and
5 perspiration to anyone, anywhere. The system of this invention comprises a
6 thermo-electric module that which in turn comprises a solid-state thermo-electric
7 chip. The system also includes a heat sink, a cold sink and a direct current
8 power source as well as a switch and associated hardware.
